

Reject-aware pipeline (v0.2, compressed 3-layer)

extract → curate → critic+predict

1. Extract

KB pairs
(V1+V2+V3, ~8000)
→ Louvain communities
→ ~24 candidate classes

2. Curate

LLM curator (Opus)
shared equation / invariants /
positive + negative examples
→ 21 candidate classes

3. Critic + Predict

B1 (single Opus)
→ B3 ensemble (3× DeepSeek)
→ KEEP / REJECT / SPLIT / MERGE
→ exponent bands + CIs

Empirical validation (downstream)

13 systems + 4 nulls + A2 phases
KEEP-verdict predictions tested
against real data

B1: single Opus critic (3/21 REJECT, 14%)

B3: 3× DeepSeek ensemble (7/21 REJECT, 33%)
